SPREADING THE WORD ABOUT CARBON MONOXIDE

03.09.26

**Carbon Monoxide (CO) Awareness Initiative**

Dear Parents/Carers,

Your child's class will be receiving a carbon monoxide (CO) workshop, fully funded by your local Gas Distribution Network. It involves teaching children the dangers of CO to help them understand what it is and how we can keep ourselves safe. Most homes are completely safe, and it's very unlikely that carbon monoxide (CO) is present.

The information will be shared with children in a friendly, reassuring way to help them feel confident about safety. CO can sometimes be produced if fuels like gas, oil, coal, or wood don't burn properly, but simple steps, like fitting an audible CO alarm, keep everyone protected. If your child has any questions or worries, please reassure them and let them know that learning about safety is an important way to take care of ourselves and each other.
You can't see, hear, smell, taste or touch CO so it's difficult to detect and exposure to it can be very harmful, so it's important to know how to spot the signs and symptoms of CO poisoning.

To support this learning, your child will be bringing home an activity pack with additional information about CO should you wish to learn more. We encourage you to review this resource with your family to reinforce the knowledge shared during the session.

If you have any further questions or need additional resources on this topic
please follow this link: CO Poisoning: Symptoms, Dangers & Prevention | Gas Safe Register

Your child's session will take place between Monday 14th September - Tuesday 15th September 2026.

Many thanks,

Miss Povey
