

Addition on a Number line

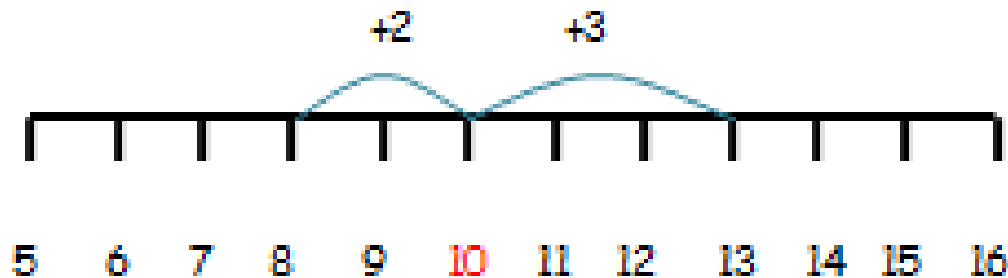

Count forward in steps of 1, 2, 5, 10 and 100 along a number line is really helpful for children to visually see the numbers that come next. It may also help children to remember the order of numbers, especially if they are visual learners.

Number lines can also be used to count up or down in a range of different amounts.

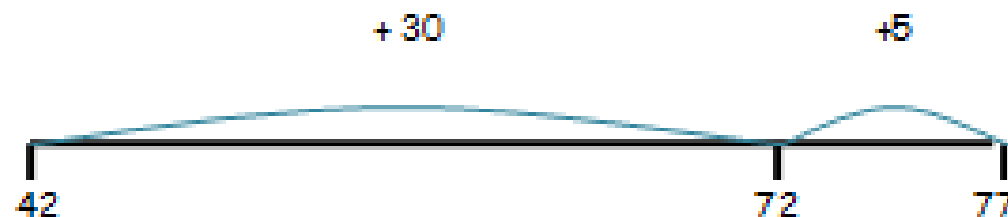

Adding on one to a number or finding one more or one less is another activity that can be done with number lines.

$$5 + 4 = 9$$

Number lines can then be used to move on children's understanding on to adding on 2, 3, 4 or 5 to any number.

$$8 + 5 = 13$$

Once children become confident adding numbers on a number line, they can then progress to adding numbers with tens and ones. This is often done through partitioning the two-digit number so that it is easy to jump on the number line.

$$42 + 35 = 77$$
